EXPERIENCE

Associate Software Engineer | Clinisys | Tucson, AZ

Jul 2024 - Present

- Contributed to full-stack development of a laboratory management platform, specializing in genomic workflows, building UI features in React/Material UI, and implementing RESTful APIs in ASP.NET Core (C#) with backend support using Oracle PL/SQL.
- Modernized the frontend by migrating legacy Backbone.js components to React with TypeScript and Material UI, and introducing Jest for unit testing.
- Collaborate with UX designers, requirements engineers, and testers to support research and inform architecture and planning, ensuring high-quality, user-focused solutions.
- Mentored three software development interns, providing guidance on best coding practices and project development.

Software Development Intern | Clinisys | Tucson, AZ

Jun 2023 - Aug 2023

- Contribute to the development and testing of a laboratory analytics web platform, enhancing the UI using React and playing a role in developing the ASP.NET REST API while adhering to Agile methodologies.
- Partnered with worldwide scrum team members to provide impactful solutions.
- Conducted strategic research to inform decision-making for the future of the product.

TECHNICAL SKILLS

Languages: TypeScript, C#, JavaScript, PL/SQL, SQL, HTML, CSS, Python, PHP

Tools: React Native, ReactJS, NextJS, MySQL, Oracle PL/SQL, Jest, MongoDB, NodeJS, Postman, BackboneJS, Git

EDUCATION

Brigham Young University - Idaho | Rexburg, ID

B.S. in Software Engineering | GPA: 4.0/4.0

Apr 2024

Web Design and Development Minor

Relevant Courses: Web Services, Full-Stack Development, UX Design, Database Design and Development, Calculus II

PROJECTS

Food Diary Mobile App | Personal Project

Jan 2024

- Developed a cross-platform mobile app using React Native and Firebase, integrating with the Edamam Food API to allow users to log meals, track symptoms, and gain insights into dietary habits.
- Implemented data visualization with React Native Chart, providing users with clear, actionable insights into their food intake and health correlations.

Rexburg SuperSaver Web App | 3rd Place Hackathon Win

Oct 2023

- Led a 3-person team in developing Rexburg SuperSaver, a React-based web app that revolutionized access to weekly grocery deals in Rexburg, Idaho.
- Utilized React for the front end, Node.js for the backend, Firebase for data synchronization, and Selenium with Python for web scraping.

Task API | Class Project | (<https://taskmaster-oq75.onrender.com/api-docs>)

May 2023

- Developed a RESTful API using Node.js and Express, integrating MongoDB for seamless CRUD operations managing teams, users, inventory, and tasks.
- Implemented Google OAuth for secure authentication within the API, showcasing proficiency in backend development and database management for scalable web applications.
